MAGAZINE NO. 68

November 2011

Hi Readers,

The dogs have again allowed me to write the lead story, lucky me. Buddy is now paying the penalty for being scavenger of note and I am paying the price to the tune of nearly R4k. The poor fellow has been very ill. I used to let the dogs run loose when we went for walks and they would pick up indescribable things in the bush. The upshot was that Buddy got two worms in the throat. They burrowed into the intestinal lining causing lumps, in turn, causing him to regurgitate his food.

It is possible for the worm to cross over into the heart which could be fatal. The vet had to put a camera down his throat and send specimens to the laboratory for analysis before commencing treatment. The normal treatment for killing the worm would be fatal if it had already burrowed into the heart. Fortunately, it was not that far advanced and the poor fellow seems to have recovered.

Apparently the vet saw this condition only two or three times a year in times past. Now they are seeing it several times a week. I now keep the dogs on leashes much to their annoyance.

Regards

ROY (General Dogsbody)

Hi All

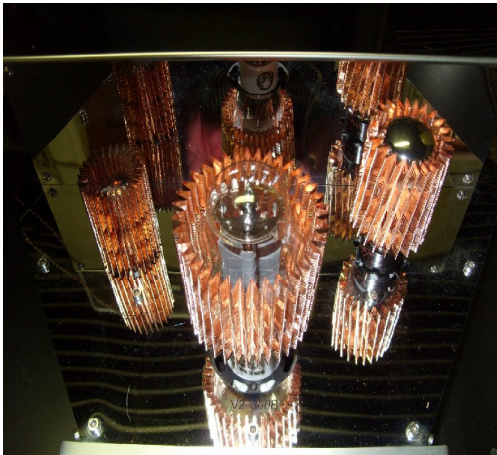

Did Dad tell you the true story of a scientist who undertook research in the Arctic regions of Northern Canada? He camped in a remote part of the Arctic to study local wildlife. Soon after he pitched his tent and got settled an Arctic wolf appeared. The wolf was not perturbed at his presence and was not aggressive at all but made it clear that the scientist had entered his territory.

The wolf was quite amiable about his occupying a small part of it and proceeded to mark the new boundary by lifting his leg at a multitude of spots around the perimeter with the scientist confirming the markings in the same way. Ultimately, when the exercise was complete, what the wolf accomplished in one pass took the scientist 32 cups of tea to duplicate.

All the best.
Jinx Davis (Dogrectrix of everything verboten)

NEW PRODUCT

Tube Life Preservers

The new Tube Life Preservers increase cooling area by three to four times thereby increasing heat dissipation and keeping the tube (valve) cooler thereby extending its life. They are available for all tube sizes. They also help in reducing microphony.

The pic shows a set of Tube Life Preservers on a Coincident Frankenstein II Monoblock power amp.

Very small sizes (ECC81/82/83/88 types) R175 each,
Medium sizes R 225 each,
large sizes (KT88 size) R275 each
plus postage.

Coincident reviews and awards

CLASS A

High End Audio USA

COINCIDENT SUPER VICTORY speakers

The Absolute Sound Editor's Choice

STATEMENT PHONO STAGE

Stereomojo Highest Recommendation Award

Blue Note Award

HIGH END AUDIO USA

Class A

***EXTRACTS FROM REVIEW OF COINCIDENT PURE REFERENCE
EXTREME SPEAKER –***

The Absolute Sound ISSUE 215.

‘The Coincident Pure Reference Extreme may be the most accurate and true-to-life loudspeaker on the market.’

‘It is a thinking man’s loudspeaker that speaks the truth whether you want to hear it or not’.

‘The imaging is the best in the business’

‘It’s exactly what the microphone picked up and replicates what the recording engineer intended you to hear. Let me be clear: The Coincident allows you, for the first time, to experience the actual craft of the engineer’.

‘It’s as if other speakers smear the sound. And it’s presented, phase perfectly, in a broad array across your room-an immersive holodeck of sound’.

These speakers are very sensitive with a benign impedance and can be driven by low output amps such as the **Coincident Frankenstein 300b 8-watt monoblocks**.

Coincident speakers range, in price from R32 000 to R274 000.
